

Jungle is Naafiri's statistically dominant role on 26.13 — this companion covers it in case you ever queue it or face it. Labels: **VERIFIED** multi-source adversarially fact-checked · **SINGLE SOURCE** one reputable source · **REASONING** game-knowledge, verify yourself. Note: your own jungle Naafiri record is 1W-2L ranked — this guide is informational; mid is where your win rate lives.

1 • Why She Jungles Now

VERIFIED ~69% of Naafiri's games are jungle on 26.13: S/S- tier, 50.5–52.3% WR Emerald+, top-10 jungler on lolalytics, 15–27% ban rate. The history: patch 26.03 restored her passive's monster damage to 155% (Riot explicitly said it was to help her clear), which moved her home to the jungle; 26.04 trimmed early mana/HP-regen sustain, and 26.10 shaved Q bleed damage and R base damage. Nerfed twice, still strong.

2 • Build & Runes

Piece	Choice	Notes
Keystone	 Conqueror (Precision)	VERIFIED Unanimous, ~92% pick rate — NOT the mid keystones (Electrocute/HoB). Jungle is skirmish-heavy; Conqueror stacks fully in extended 1v1s over Scuttle/objectives.
Minors	Triumph · Legend: Haste (or Alacrity) · Coup de Grace	Skill-Capped's case for Haste: she barely autos in fights. Secondary: Inspiration (Triple Tonic + Cash Back — highest WR) or Domination (Sudden Impact + hunters).
Start	Scorchclaw pup + Long Sword	Gustwalker appears in some featured builds.
Core	 Voltaic →  Axiom Arc →  Serylda's	VERIFIED Most popular core (~22% of games, ~54.8% WR). Boots split: Ionian Lucidity (most picked) vs Plated Steelcaps (Skill-Capped).
Highest-WR variant	 Brutalizer → Voltaic →  Black Cleaver	VERIFIED Bruiser-lethality hybrid, 53% WR vs 51% for pure lethality (Blitz). Worth defaulting into tanky comps.
Situational	Edge of Night, Death's Dance, Shojin, Serpent's Fang, GA, Eclipse, Maw, Hubris, Profane Hydra	Same logic as mid: buy for the specific problem.

VERIFIED Skill order (unanimous, ~67% of games): Q1 → E2 → W3, max **Q > E > W**, R at 6/11/16. A Q>W>E claim was refuted 0–3 in verification. Her damage is ~92% physical.

3 • The Clear

VERIFIED The one mechanic that defines her jungle: **Q's cooldown starts only after Q2** (or when the 4s recast lapses). Between camps with no downtime, **recast Q2 immediately** so it's back up for the next camp; delay Q2 only when you need the full bleed detonation. Landing both casts matters everywhere — missing one drastically lowers her damage.

Honest gap: no specific first-clear route survived fact-checking (the one candidate — blue start → Gromp → Wolves → Raptors → Red → Krugs — was refuted 0–3). **REASONING** Practical approach: her clear is on the slow side pre-26.03-buff levels, so full-clear toward the side you intend to gank, and practice-tool your route once — time it; sub-3:30 full clears are the benchmark for most AD junglers.

4 • Early Game: Respect the Weakness

VERIFIED She's weak levels 1–5: slower early clear, no escape tools, loses early duels — enemy junglers are told to punish her exactly then. So: don't contest early Scuttle into strong duelists, full-clear, hit your item spike (1–2 items), then flip aggressive. Post-Voltaic she wins most 1v1s — that's the Conqueror synergy and your cue to skirmish over every objective.

5 • Ganking & Snowballing

- VERIFIED** **Post-6 ganks are her identity:** R is a 900-range point-and-click dive with a takedown recast — gank lanes with CC, kill, recast onto the second laner. Fast roam/pack mobility spreads leads across the map; isolated targets are the diet.

- VERIFIED** **Snowball levers:** (1) picking up early kills → pivot rush from Voltaic to  Hubris to compound gold; (2) Voltaic completing is the green light to force skirmishes and invade; (3) chain takedowns — R recast + Axiom Arc refunds turn one kill into multi-kill fights; (4) convert every gank into an objective (Dragon after bot ganks, Herald/grubs after top).
- REASONING** Same Hubris rule as mid: it needs guaranteed takedowns to out-value Voltaic's unconditional proc. 2–3 kills before first full item = Hubris window; even game = Voltaic.

6 • Matchups (Jungle)

VERIFIED The verified matchup table covers junglers only — Bel'Veth, Briar, Kayn, Nocturne, Hecarim, Rammus are the current meta opponents tracked on u.gg. **REASONING** Principles: early-duel monsters (Bel'Veth, Briar, Lee) beat you levels 1–5 — trade map-side, don't fight; scaling/farm junglers you out-tempo after Voltaic; Rammus is the classic "your whole kit is physical" counter — 92% physical damage means armor stackers blunt you; go Serylda's earlier or the Cleaver hybrid.

7 • Balance History Cheat Sheet

Patch	Change	Practical effect
26.03	Packmate monster damage 135% → 155%	The buff that made her a jungler
26.04	Base HP regen 7.5→6.25 (growth 0.7→0.6); Q mana 55–75→50–90; E mana 35→40	Early sustain tax — first-clear health matters more
26.10	Q vs bleeding targets 30/45/60/75/90 → 30/42.5/55/67.5/80 (max detonation 160 from 180); R base 150/250/350 → 150/225/300; passive monster mod trimmed to 145%; W mana up	Damage shave — she kills squishies fine, bruiser kills got slower

VERIFIED against LoL Wiki patch history + Riot patch coverage; no reverts through 26.13.
