

Naafiri Top

Companion guide for **soup minion#NA1** · Patch 26.13 · July 2026

Labels: **VERIFIED** multi-source / re-fetched · **SINGLE SOURCE** · **REASONING**. Kit, combos, and item encyclopedia live in the mid guide — this covers what *changes* top.

Why play her top at all

VERIFIED At Emerald+ she's a solid A-tier top (52.2% WR, rank ~20/110, 13.3k games). At **your elo she is lolalytics' #1 graded top laner — S+, 52.18%, 13.9k Gold games**. Only 6% of Naafiri games happen top, so nobody knows the matchup. The lane is longer, the enemies are melee juggernauts who can't punish 900-range Q poke, and bush control is packmate heaven. The catch: it's a kill lane with no safety net — **Teleport measurably loses on her** (below).

1 · Runes & Builds

VERIFIED Keystones top, Emerald+: **DFT 54.2% WR** (highest; 20% pick — same at Gold: 54.2%) · HoB most common (49%, ~52.5-52.8%) · Electrocute 52.1% · **Conqueror is a trap: 49.4%** — it reads like a bruiser-lane keystone and loses like one. Your comfort page is the best page here.

TOP A — Deathfire Touch

DEFAULT — highest WR, and it's already your page

Primary — Sorcery

Deathfire Touch

Manaflow Band
Transcendence
Scorch

Secondary — Precision

Cut Down

Triumph (top swap — not
Legend: Haste)

Shards

Adaptive
Adaptive
Health

Build order

Doran's Blade → **Brutalizer**
→ **Voltaic** → boots (Ionian or
 Glutt. Greaves — even split top)
→ **Axiom Arc** → **Serylda's**
→ EoN / DD / Maw

VERIFIED

54.15% WR page (n≈2,674). DFT + Scorch turns the long top lane into a bleed-out: juggernauts have no answer to 900-range Q + burn. Under DFT top, the late slots are monstrous: Serylda's 3rd 62.6%, EoN 4th 65.0%, Shojin 3rd 61.2%.

TOP B — Hail of Blades

KILL-LANE READS — dive-able melees, and you want level 1-3 blood

Primary — Domination

Hail of Blades

Sudden Impact
Grisly Mementos (top
swap for Sixth Sense)
Treasure Hunter

Secondary — Sorcery

Manaflow Band
Transcendence

Shards

Adaptive
Adaptive
HP-scaling

Build order

Same lethality core: Doran's → **Brutalizer** → **Voltaic** → boots →
 Axiom → **Serylda's**

VERIFIED

Most-common top page, 52.52% (n≈6,520). The mid guide's §2b HoB route works unchanged — top melees are easier HoB targets than mids.

Bruiser top? The honest data

VERIFIED

Eclipse-first is picked in 21% of top games and **wins only 49.7%** — the lethality core beats it top just like mid. The real bruiser-adjacent line top is late-slot: Death's Dance 56.8%, Maw 58.1%, Shojin 56.4%, Endless Hunger 61.0%, Bastionbreaker 63.1% (n=236). So: **lethality items 1-3, bruiser items 4-5**. The Eclipse → Cleaver → Shojin full-bruiser line exists (~1/7th of the play) but has no statistical edge. And the split-push fantasy is dead: Hullbreaker top has **n=3**. Your Setup D (mid guide) transfers as written for the vs-bulky-comp games; expect the same measured burst tax.

2 • What changes about the game plan

Lever	Mid habit	Top adaptation
Summoners	Flash + Ignite	Still Flash + Ignite VERIFIED — 52.8% WR at 87% pick. Flash+TP wins 49.3%: TP costs ~3.5pp . She converts kills, not map rotations. If you take TP you've picked the wrong champion for it.
Skill at level 1	Q first, always (63%)	Q first is still standard (40%), but W first is a real top tech (26% of games) : the 1s untargetability blanks a Darius pull, a Renekton stun trade, or a level-1 cheese. Take it when their level 1 is scarier than yours.
Poke pattern	Poke → shove → roam	Poke → freeze near your tower → they overextend into a 900-range R lane. Roams are 2× as expensive top (longer lane) — convert leads into plates, dives with your jungler, and Herald instead.
W usage	Pre-cast on engage (\$1b mid)	Often better held defensively : it's the "dodge the Darius Q / Garen silence / Illaoi E button" SINGLE SOURCE — juggernaut lanes hinge on one dodged ability. In hard matchups W is your Sivist spell-shield, not your steroid.
Bushes	—	Top brush is packmate radar: a packmate parked in the river bush is a free ward. Q through the bush at fog-shapes — packmates will chase what you can't see.

3 • Matchups

VERIFIED

(Emerald+, n≥80 per row; header counters re-confirmed on two sites)

Tier	Matchup (Naafiri WR)	The plan
Feast	Vayne 62.6 · Tahm Kench 62.1 · Varus 61.9 · Gwen 59.2 · Mundo 58.9 · Gnar 58.2 · Teemo 57.7 (your most common lane, n=763) · Rumble 57.3 · Akali 56.7 · Volibear 56.1 · Aatrox 55.8	Ranged bullies lose to her here: packmates eat their poke, one R erases them. Vs Teemo — dogs don't get blinded; run him down post-6.
Playable	K'Sante 54.5 · Darius 54.3 · Jax 54.3 · Pantheon 54.3 · Gangplank 54.2 · Illaoi 54.1 · Yorick 53.7 · Mordekaiser 53.6 · Nasus 52.7 · Sion 52.4	The juggernaut package: poke from 900, never trade inside their effect radius, W the signature ability (Darius Q, Morde E, Illaoi E), kill on their cooldowns.
Respect	Yone 48.9 · Malphite 48.4 · Camille 48.3 · Sett 48.1 · Riven 47.9 · Tryndamere 47.9 · Yasuo 47.6 (windwall eats Q) · Renekton 46.2 · Jayce 46.0 · Fiora 45.5 · Garen 45.3	Same rule as mid's Riven/Talon lanes: E strictly defensive, concede levels 1–3, poke only after their engage whiffs. Garen: respect the silence — Q2 immediately, don't hold it SINGLE SOURCE .
Dodge/ban	Warwick 39.0 · Irelia 38.9 — her single worst matchup in the game	Irelia Q's your dogs for free passive stacks and resets — "she one-shots your packmates and heals off them" SINGLE SOURCE . This is the ban slot top. Warwick outsustains everything you do pre-3-items.

Gold-tier header differs slightly (counters Camille/Vayne/Kennen; countered by Warwick) — the Irelia/Warwick/Garen red zone holds at both tiers. Her damage is ~88% physical, so their armor stacking works — which is why your Serylda's-or-Cleaver timing (one only: they share the Fatality shop limit) decides the 25-min+ game.

4 • Top-specific win condition

REASONING

from the verified pieces: top Naafiri's game is lane kill → plates → Herald window → group mid as the extra assassin nobody drafted against. You are not a side-lane 1-3-1 piece (no TP, no Hullbreaker data, falls off vs stacked armor) — after two items, treat top like mid's \$7 loop: crash the side wave, then be at every mid-map fight with R up. The mid guide's flowcharts apply from minute 14 on; only the laning chart changes (no roam branch — its replacement is "freeze or dive").
