

Naafiri Bot

Companion guide for **soup minion#NA1** · Patch 26.13 · July 2026

Labels: **VERIFIED** multi-source / re-fetched · **SINGLE SOURCE** · **REASONING**. Kit, combos, and item encyclopedia live in the mid guide. **Read the sample sizes here** — bot is 0.6% of her games; nothing bot-specific has mid-sized data.

The honest verdict first

VERIFIED Naafiri bot (carry position) is a **legitimate niche pick, not a troll pick — but the data is thin and split**: lolalytics has her at 52.8% over 1,290 Emerald+ games; skill-capped's cut says 48.0% over 999. Truth: somewhere in "roughly even, playable when conditions are right." Pick it when the enemy botlane is **immobile and low-poke**; don't first-pick it. **Naafiri support is a troll pick: 43.3% over 1,059 games** — the one role verdict in this project that isn't close.

1 · Why it works — and why it sometimes doesn't

REASONING (no site publishes duo-lane data at this sample size, so this section is mechanics, labeled as such):

- **Works**: 900-range Q poke outranges every ADC's autos; packmates eat the skillshots that supports throw; Gluttonous omnivamp + Q heal out-sustains most 2v2 poke; and post-6, a point-and-click 900-range R onto an ADC — in a lane where both targets are squishy — is a permanent 2-for-0 threat. The R-reset weave (\$1b mid) is *better* in a 2v2 than anywhere else: two kills are standing next to each other.
- **Doesn't**: duo XP delays level 6 by ~2-3 minutes — and post-midscope, **level 6 is her entire engage pattern** (the dash is her R). Pre-6 she is a poke bully with no gap closer and no escape past E. Artillery poke she can't dodge (Ziggs, Senna, Brand support) drains her before 6 ever matters, and hyper-all-in duos (Samira, Nilah + engage support) fight her at level 2 where she's weakest.

2 · Runes & Build

 **BOT — the one setup**

same assassin package — she does not build marksman items

Primary — Domination	Secondary — Precision	Shards	Build order
Hail of Blades Sudden Impact Grisly Mementos Ultimate Hunter (bot swap — R uptime over gold)	Triumph Cut Down	Adaptive Adaptive Health	Doran's Blade → Brutalizer → Voltaic (55.5% / 722 g) → Glutt. Greaves (56.0%) → Axiom Arc → Serylda's → EoN (59.1% as 5th) / Serpent's Fang vs enchanters

VERIFIED

 sequences /

SINGLE SOURCE

 exact WRs. Notes: op.gg's HoB cohort bot is mediocre (48.3%, 431 g) while a Sorcery-secondary Transcendence variant runs 54.2% (177 g) — and lolalytics' *highest-WR* bot page is **Summon Aery** (56.5%, 271 g), which fits the pre-6 poke-bully reality. Translation: in a lane that's poke-heavy, your mid DFT/Sorcery instincts may genuinely beat HoB here; the data is too thin to settle it, so run what matches your lane read. Your DFT page (mid Setup B) is untracked bot — nobody plays it — but its logic transfers.

Summoners

SINGLE SOURCE

: lolalytics' best-shown pair is **Flash + TP at 58.3%** (127 games) — pilots treat her as a transplanted solo-laner, TP-ing back to hold the poke lead. Skill-capped says Flash+Ignite. Either is defensible; Heal is not (your support can carry Heal).

2b · Comp adjustments

REASONING

Full framework in the mid guide (§3b); bot flavor: **(1)** 2+ real tanks → Serylda's climbs to 3rd and one-shots stop being the plan — in the 2v2 your target is the softer half of their duo. **(2)** Engage support (Leona, Nautilus, Blitzcrank) → Edge of Night 3rd: the spellshield eats the hook or point-click stun that starts every dive on you, and your defensive slot arrives 3rd, not 5th. **(3)** Enchanter duo → Serpent's Fang — shields aren't healing, GW does nothing to a Lulu W; named healer (Soraka, Yuumi) → exactly one teammate buys GW ("two GW items is still 40%, not 80%"). **(4)** The page's Cut Down slot (now "8% vs champions above 60% max health") fits beefy comps; swap to Coup de Grace vs four squishies — executes chain straight into R resets.

3 · Matchups — read the n's

VERIFIED

Matchup	Signal	Note
vs Caitlyn	58.2% over 110 games	The ONLY bot matchup clearing lolalytics' 100-game bar — and it's a stomp. Packmates shield the trap-headshot poke; post-6 R ignores her range advantage. If they lock Cait, Naafiri bot stops being a meme.
vs Ezreal 61.5 (n=52) · Jinx 58.3 (48)	directional only	Immobile/passive carries she dives on cooldown.
vs Ziggs 29.6 (27) · Samira 32.1 (28) · Senna ~29 (stale) · Ashe 46.7 (45) · Lucian ~46 (47)	directional only	The two death profiles: artillery poke and level-2 all-in. (Mobalytics lists Ziggs as a champ she <i>counters</i> — conflicting tiny samples; trust the pattern, not either number.)

4 · Duo dynamics

REASONING

- **Best supports:** engage with CC that holds still (Leona, Nautilus, Rell) — their chain → your R is a guaranteed connect, and the takedown arms your recast onto the second target. The R-reset weave is the whole 2v2 win condition post-6.
- **Also fine:** poke mages (Xerath, Lux) who make the lane a 900-range shooting gallery you're already best at.
- **Awkward:** enchanters — you don't auto often enough to carry their buffs; and if the *enemy* runs an enchanter, buy Serpent's Fang (50% shield cut) by 3rd-4th.
- **Lane rhythm:** pre-6, play it like your mid poke war (§6 mid) with a bodyguard: Q on their support's engage cooldowns, W held for their all-in button. Post-6, every wave-crash owes the map the same §6 decision — except your "roam" is usually the drake pit 20 seconds away.

Support Naafiri — the data says no

VERIFIED

43.3% WR over 1,059 games; her *best* support rune page wins 44%. No gold = no lethality spikes = a champion whose entire kit scales on bonus AD, with no bonus AD. The one-line verdict: if you want Naafiri and got autofilled support, that's what role swaps and dodges are for.

Compiled 2026-07-05 (Phase 2) · Patch 26.13 · Stats: lolalytics Emerald+ bot/support cuts + tier=all item rows, op.gg ADC cut, skill-capped ADC page (all re-fetched 2026-07-05); every sub-100-game figure labeled directional · Duo-lane dynamics are REASONING — no site publishes pairing data at this sample size · Kit/recipes: Riot Data Dragon 16.13.1 + LoL Wiki · Companion to the mid guide · Images © Riot Games (Data Dragon CDN), non-commercial fan content.
