

Labels: **VERIFIED** fact-checked multi-source · **SINGLE SOURCE** lolalytics only · **REASONING** derived · **YOUR DATA** your op.gg match history. Stats: lolalytics 26.13, Emerald+ unless marked. Kit numbers, combos, R rules, and item deep-dives live in the jungle guide — this one covers what *changes* per role.

1 · The Report Card

YOUR DATA You've already played Brand in all five positions this season (6-2 overall). Here's what the data says each role is actually worth:

Role	Win rate (E+ / Gold)	Share of Brand games	Verdict
Support	51.9% / 51.5%	46-57%	VERIFIED His home role. A-tier at Gold, six-figure sample. Where the ban rate comes from.
Bot (APC)	53.8% / 53.6%	19-31%	VERIFIED His highest win rate anywhere. A legit pocket pick that farms real ADCs.
Mid	51.4% / 50.9%	13-15%	VERIFIED Niche but not troll — above lane average, punished by specific counters.
Jungle	48.6% / 48.7%	3-5%	VERIFIED The fun off-role. See the main guide.
Top	REASONING	5% of games, no reliable data at your elo — you went 1-2 there; treat it as filled-into, not a plan.	

2 · What never changes

- VERIFIED** **Runes:** Deathfire Touch + Manaflow + Transcendence + Scorch, Precision secondary — the top page in *every* role, and the page you already run. Only the Precision row flexes: **Cut Down** (support/bot) vs **Coup de Grace** (mid's most common — dead-opposite rune, 8% vs targets *below* 40%; both fine, pick per enemy comp like the jungle guide's §6d).
- VERIFIED** **The item spine:** a torch (Liandry's or Blackfire), Sorcerer's Shoes, Rylai's, then Zhonya's/Shadowflame/Morello situationals. Same mechanics fine print as jungle §6: item burns don't proc Rylai's, your Blaze does; Shadowflame makes burns crit below 40%; one Blight item max.
- REASONING** **The teamfight:** identical in every role — 900-range W, E to spread, R the burning clump, never first through the door. Support Brand and jungle Brand die to the same mistake: standing 300 units too far forward.

3 · Support — the home role

YOUR DATA Your two Brand support games are quietly your best Brand games: a 10/8/20 MVP (op_score rank 1 in the lobby) with 25 wards and 2 pinks, and a 4/7/2 win with 21 wards and 4 pinks. You ward like a support and fight like Brand — that's the whole job description.

Piece	Standard	Notes
Start	 World Atlas + 2 pots	VERIFIED Quest gold from poking (your W/E hit champions = quest progress) → upgrades itself; at the final step pick Zaz'Zak's Realmspike (89.6% of Brands): your ability damage detonates a %-max-HP void explosion on a 10s cooldown — Blaze ticks proc it automatically.
Core	 Zaz'Zak's →  Rylai's →  Sorcs	VERIFIED 55.4% WR core (n≈17.5k). Rylai's second is the support signature — perma-slow peel for your ADC without needing gold for damage items. Liandry's 3rd (54.7%).
Summoners	Flash + Ignite	VERIFIED 71.5% pick — kill-lane default. Interesting: Exhaust+Flash posts the highest WR of the three (52.6%) — take it vs dive/assassin bot lanes and use it on the diver.
Skills	W → Q → E, max W>Q>E	VERIFIED Same as jungle. Poke pattern: W on the wave-edge where they'll step, E when they're close enough, Q only when they're burning (the stun threat is what makes them stand back).

VERIFIED Matchups: you feast on engage tanks and mid-range mages — Mel (62.3%), Swain (60.8%), Alistar (54.2%). What actually beats you is **enchanters who out-sustain your poke**: Milio is the robust worst (48.3%, n=2,141), then Janna. Into those, stop trying to poke them out and play for level-6 all-ins with Ignite + detonation instead — their heals can't answer a 3-stack + Zaz'Zak's proc burst. **REASONING** Your Grievous rule from the jungle guide applies double here: vs Soraka/Milio/Yuumi, an early Oblivion Orb (800g) on a support income is the highest-value 800g on your team.

4 · Bot APC — the pocket pick with the best numbers

VERIFIED Brand replacing the ADC wins **53.8%** at Emerald+ — his best number anywhere — because most ADCs simply lose lane to a mage: he outranges their damage window with W (900) and out-trades anything that steps up, and Cut Down is nearly always live vs full-HP marksmen. You went 1-1 in your two APC games; the champion's data says there's more there.

Piece	Standard	Notes
Start & core	Doran's Ring →  Blackfire →  Sorcs →  Rylai's	VERIFIED Bot is where your Blackfire habit is <i>correct</i> : 77% first-item pick, 54.0% WR, and the top line (BFT→Sorcs→Rylai's) wins 55.4% on n≈12.8k. With a farm income you hit item spikes an ADC pays 30 more CS for. 4th: Shadowflame (57.8%).
Summoners	Flash + TP or Flash + Barrier	VERIFIED TP is most picked (47%), but Barrier is the standout: 55.4% WR on ~13k games — it flat-out cancels the "assassin jumps the immobile mage" script. At your elo, take Barrier.
Skills	W → Q → E, max W>Q>E	VERIFIED Same string as support/jungle (the mid E-max flip below doesn't apply — your support helps you shove).

VERIFIED Matchups: you beat conventional ADCs (at Gold: Varus 60.3%, Kalista 59.6%, Lucian 57.6%) and Nilah/Ezreal/Smolder at Emerald+. What beats you is **the mage-bot mirror** — Seraphine is the robust worst (46.7%), with Lux behind her: they match your range and their utility outscals your damage. **REASONING** Duo note for flex nights: this is the role where your premades help most — a hook/engage support (the Blitzcrank you already play, or a tanky Naafiri support game) converts your E→Q stun into lane kills from level 2.

5 · Mid — playable, with two predators

VERIFIED Mid Brand is 51.4% at Emerald+ on a small pick rate — real, above lane average, and one of your 5 mid games this season was a Brand mid win. Two things change from every other role:

- VERIFIED Skill max flips to W > E > Q** (73.8% of mid games): E's bounce off a burning minion is your waveclear and your safe poke — E a caster minion near their laner and the spread fire reaches them without you stepping up. Order stays **W → E → Q** at 1/2/3.
- VERIFIED Both torch lines work; the winning one is Liandry's**: BFT→Sorcs→Rylai's is most common (52.5%, n=3,047) but **Liandry's→Sorcs→Rylai's wins 56.9%** (n=1,785) — consistent with the Silver-tier torch lesson in the jungle guide. Summoners: Flash+TP is standard, but **Flash+Ignite wins more** (52.3% vs 51.1%) and fits a kill-lane style.

VERIFIED Matchups: comfortable vs juggernaut-mids and skirmishers — Ryze (60.3%), Mel, Yone (55.2%). Two archetypes genuinely beat you: **dive assassins** (Fizz 42.9% is the worst, and his E dodges your whole combo) and **longer artillery** (at Gold: Xerath 40.6%, and — brace yourself — **Naafiri mid 42.3%**, so don't queue into your duo's champ). Into either: max-range W farming, Zhonya's second, and let your jungler know your lane can't be won alone.

6 · Which role tonight?

Situation	Play
Flex night, Jasio on Nunu jungle	REASONING Support (his home role; you've been MVP there) or bot APC with an engage support. Jungle's taken anyway.
Flex night, no Jasio	REASONING Jungle if you want the project (main guide), support if you want the win.
Solo queue, climbing	VERIFIED Bot APC or support — his two best win rates, and both scale off what you already do well (fighting, warding).
Enemy locks Milio/Seraphine bot	REASONING That's the counter to support/APC Brand respectively — swap targets: play the <i>other</i> bot-side role, or mid.

7 · Fine print

- All win rates: lolalytics, patch 26.13, snapshot of 2026-07-06 (single stat site; matchup decimals drift within a patch). Cells under n=300 were excluded or called out.
- Top lane omitted deliberately: 5% pick, no robust data — nothing worth teaching.
- Patch 26.14 lands ~July 8-9; the 26.13 Brand nerf (detonation floor, E mana) already hurt lane roles less than jungle, but numbers here should be re-pulled after it drops.

Brand Roles Companion — built July 6, 2026 for send help#2366 at Campbell's request · Patch 26.13 / Data Dragon 16.13.1 · Sources: lolalytics 26.13 (support/middle/bottom payloads, Emerald+ and Gold cuts), League Wiki, Riot Data Dragon 16.13.1, op.gg match history (position-field verified).
